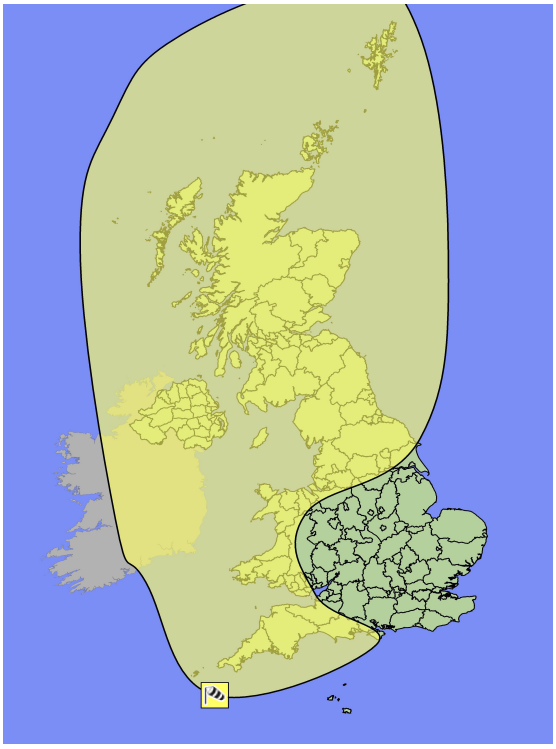
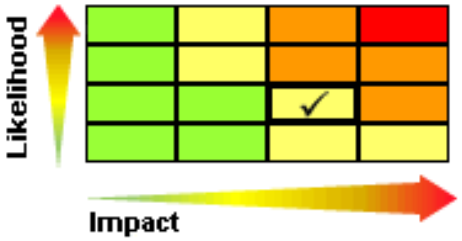
National Severe Weather Warning Service





Chief Forecasters Assessment
Forecast models continue to differ in the handling of the transition of hurricane Katia to a deep extra tropical depression, though give a clear signal for the risk of very strong winds, particularly for northern and western parts of the UK. There is the potential for 60-70 mph gusts and 80 mph or more could not be ruled out for the most exposed locations.

The Met Office have issued a **Yellow Alert** of **Wind**

Valid from **00:00 on Mon, 12th Sep 2011** until **23:59 on Mon, 12th Sep 2011**

The remains of Hurricane Katia are expected to come across the UK on Monday bringing a spell of very windy weather. There remains a fair amount of uncertainty about its track and intensity, and warning areas may be extended or upgraded to amber in subsequent issues, but the best estimate currently is that northern and western parts of the UK are most at risk from very strong winds. The public should be aware of the risk of disruption to transport and of the possibility of damage to trees and structures.
